

INTEGRATING BERKS COUNTY AND BEYOND

Wiring by Wall, Inc. / EVO Integration

Justin Wall

Did you know that manufacturing accounts for about 10% of all employment across Montgomery, Chester and Berks Counties? That's just over 94,000 people employed by more than 2,000 manufacturing establishments, producing pharmaceuticals, food & beverage, metal products and much more. What do they all have in common? The need for an integrator who can help all of their machines and software work together.

Meet EVO Integration, a subsidiary of Wiring by Wall, Inc., based in Shoemakersville, Pa. Wiring by Wall was started in 1977 by David Wall as an electrical business providing residential, commercial and industrial electrical services. The business evolved over time, expanding into industrial automation and controls when David's son, Justin, joined the company and eventually founded EVO Integration to meet the growing need.

Today, EVO Integration serves manufacturing facilities throughout the region and across the country with smart solutions for controls, communication and manufacturing performance. As a premier integrator, EVO fills the missing link that allows a manufacturing facility to bring the various types and brands of equipment into one common data portal, allowing managers to make better, faster decision, reduce downtime and increase profitability.

Wiring by Wall and EVO Integration are truly complementary companies, providing engineering expertise and hands-on electrical – all under one roof! This fall, they will also be hosting the 2nd Annual EVO Expo – a 2-day automation event that offers classes, live demonstrations, and a tradeshow. This year, the EVO Expo will be held Oct. 6–7 at Delta Hotel in Breinigsville, Pa.

EVO Integration is proud to support the local community, both within and beyond the industrial automation sector. In addition to employing nearly a dozen talented individuals, the company donates time and resources to the local township and launching a new "Miracle on Main" community event in Shoemakersville later this year.
